

Tiles, Tilesets & Tilemaps

Tiles are like puzzle pieces, small sprites that join to create larger images.

Tilesets are collections of these tiles, designed to represent objects or elements like roads or pavements.

Tilemaps are the larger scenes built from tilesets, forming complete landscapes or backgrounds.

This system streamlines the art process, allowing pixel artists to construct complex scenes efficiently.

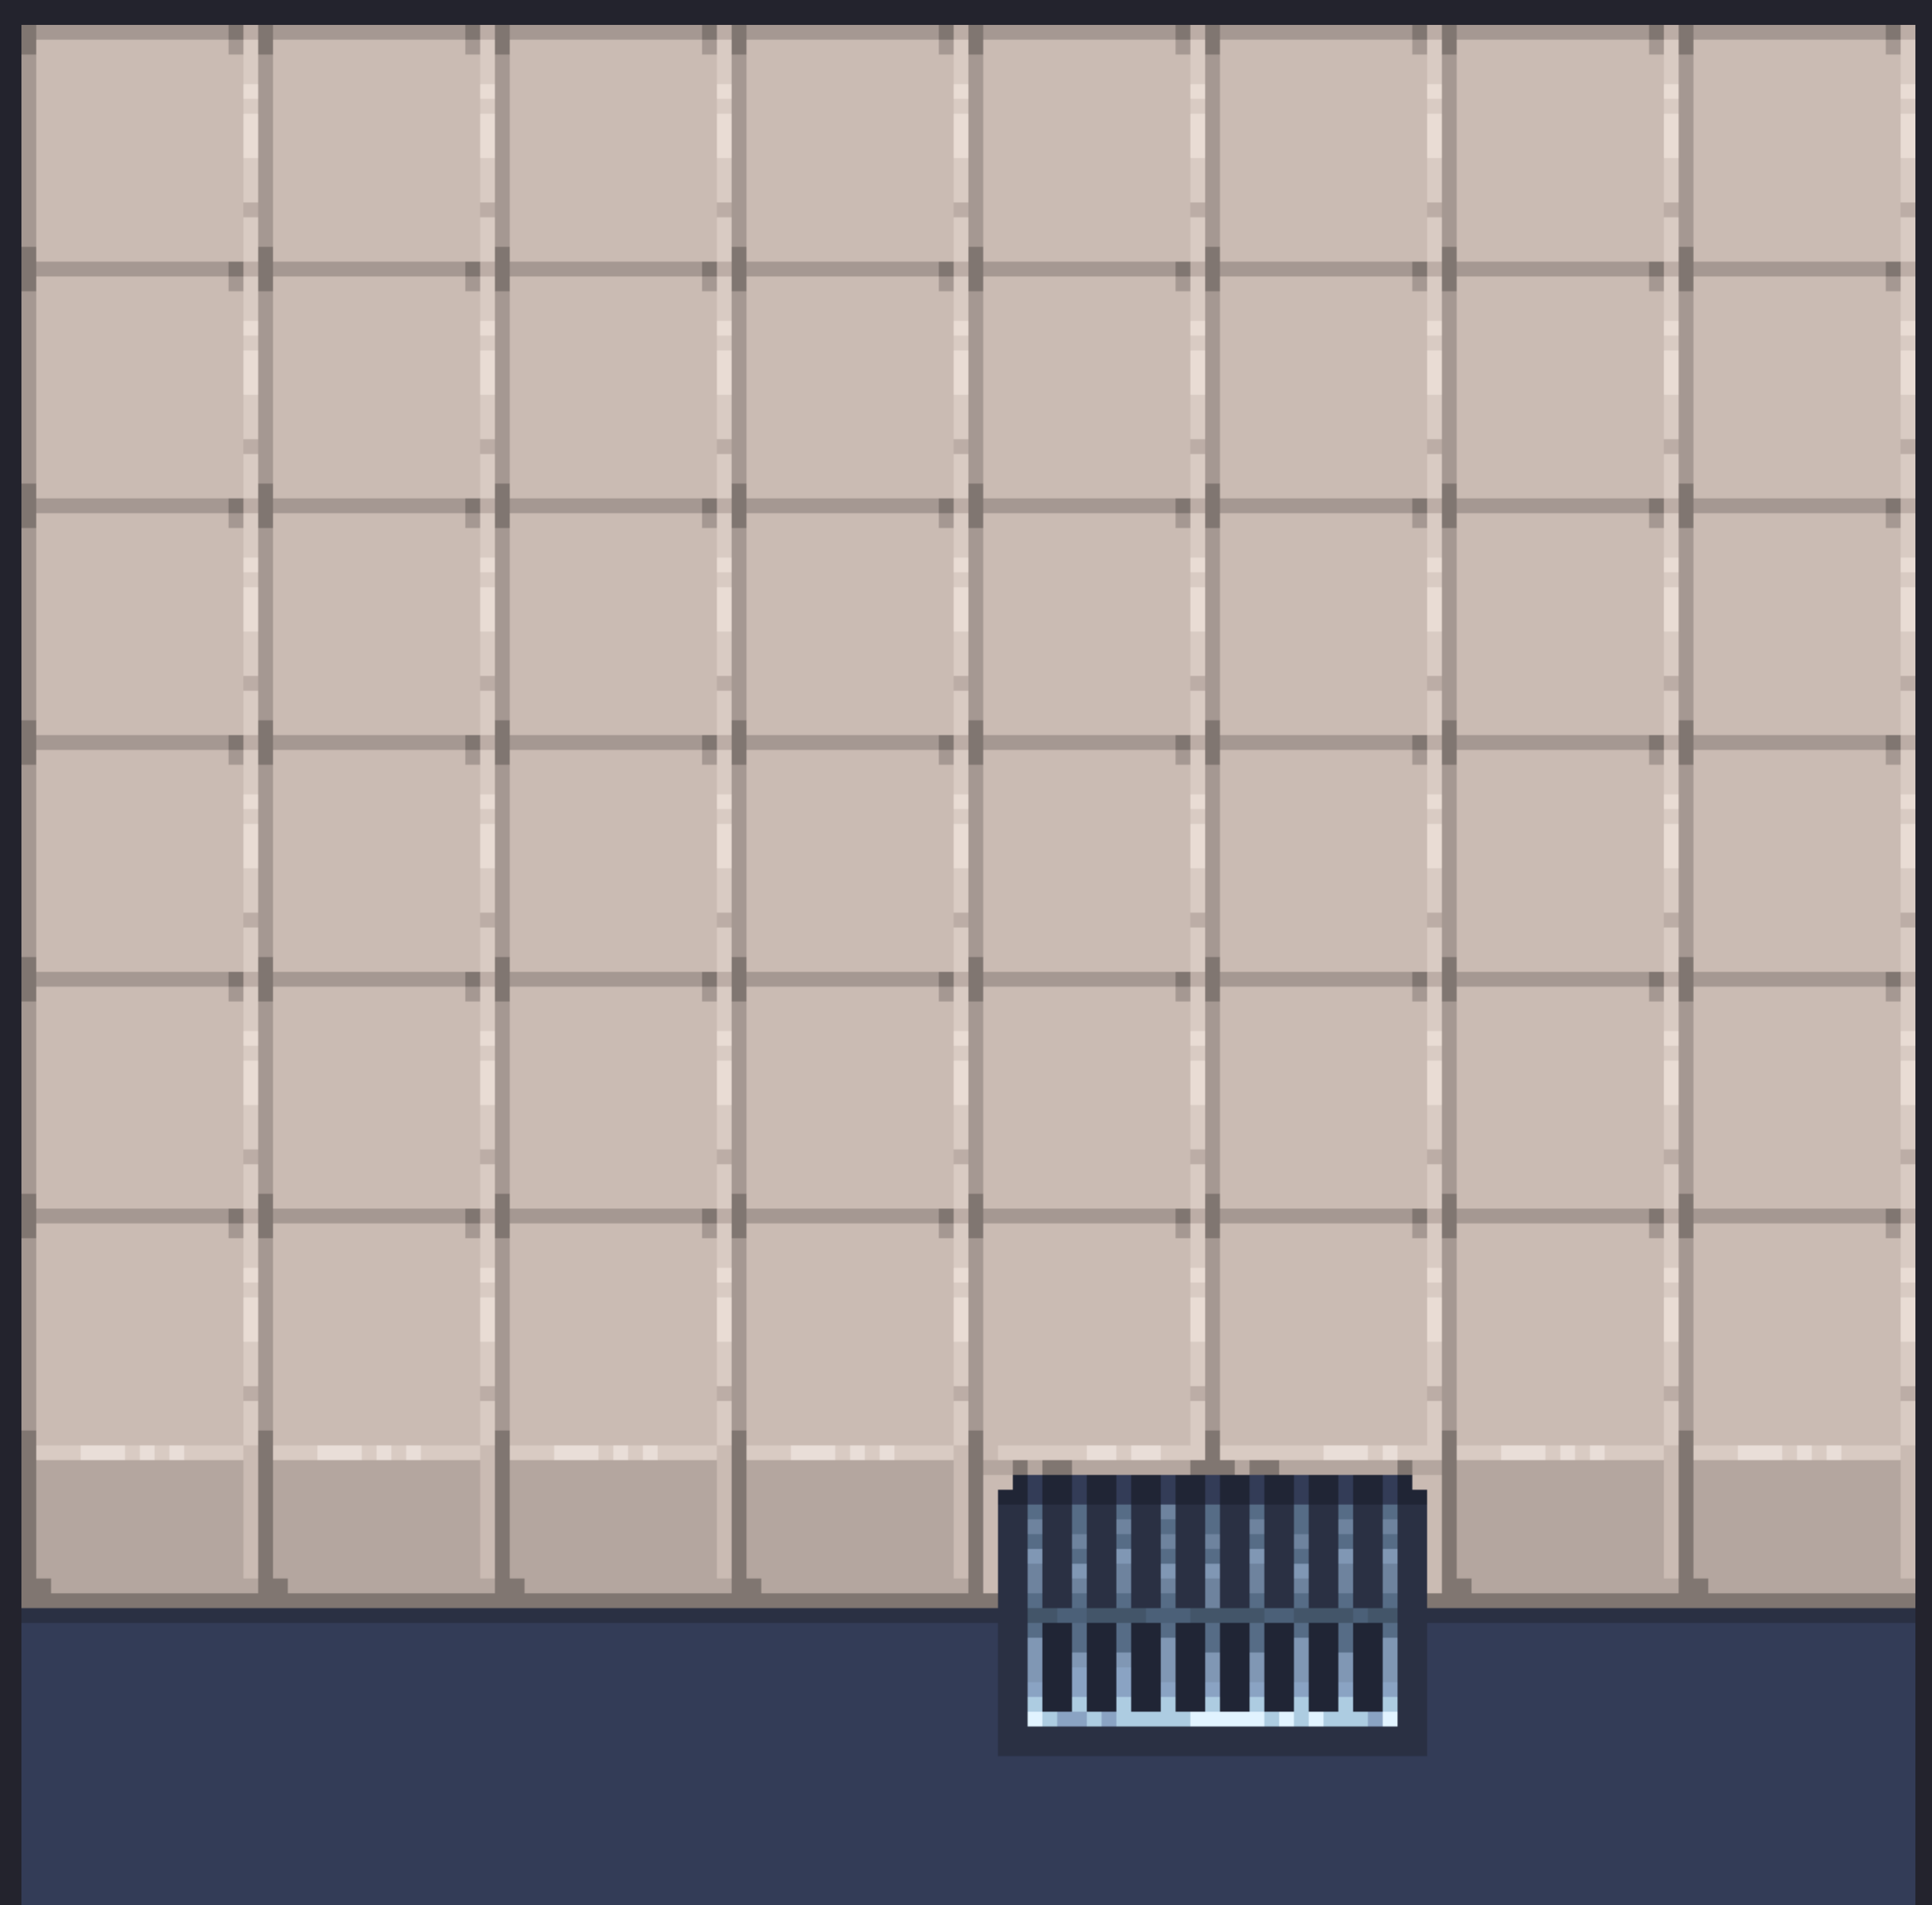

By editing just one tile in a set, changes automatically apply across the entire tilemap, saving immense time.
